Precision Care

The rapid advancement of medical science and healthcare technology has brought significant transformation to the practice of internal medicine. This transformation is reflected not only in the growing adoption of precision-based diagnostic and therapeutic approaches, but also in the increasing integration of digital technologies into healthcare delivery. At the same time, the growing complexity of healthcare demands reminds us of the importance of clinician well-being as a fundamental pillar in providing high-quality patient care.

In response to these evolving challenges and opportunities, PIT IPD 2026 proudly presents the theme, “Transforming Internal Medicine in Indonesia: Precision Care, Digital Health and Clinician Well-Being.” This theme reflects our collective commitment to advancing internal medicine through personalized healthcare, innovative digital solutions, and greater attention to the well-being of healthcare professionals as an integral component of a sustainable healthcare system.

Through a comprehensive scientific program featuring symposia, workshops, research presentations, and interactive discussions led by distinguished experts from various fields, we hope that PIT IPD 2026 will serve as a dynamic platform for knowledge exchange, professional collaboration, and innovation in internal medicine.

We believe that progress in medicine can only be achieved through continuous learning, meaningful collaboration, and an unwavering commitment to improving patient care. Therefore, we encourage all participants to take full advantage of this opportunity—not only to enhance their scientific knowledge and clinical competencies, but also to strengthen professional networks and foster collaborations that will contribute to the future of healthcare in Indonesia.

We hope that this meeting will provide valuable insights, inspire new ideas, and contribute meaningfully to the advancement of internal medicine and healthcare services throughout Indonesia.
